

Vscode

Arduino

- **Intellisense bug du fichier “WProgram.h”**: éditer le fichier contenant l'inclusion de ce fichier et le remplacer par “Arduino.h”.
- **Intellisense bug de “Serial**: ajouter au fichier “c_cpp_properties.json” :

```
"defines": ["USBCON"]
```

- Configuration de l'inclusion des chemins dans le fichier “c_cpp_properties.json” :

```
{
  "configurations": [
    {
      "name": "Linux",
      "includePath": [
        "/data/jpm/Applications/arduino/tools/**",
        "/data/jpm/Applications/arduino/hardware/arduino/avr/**",
        "/data/jpm/Applications/arduino/hardware/tools/avr/avr/**",
        "/data/jpm/Applications/arduino/libraries/**",
        "/data/jpm/Applications/arduino/libraries/Servo/src/",
        "/home/jpm/Arduino/libraries/IRremote/"
      ],
      "forcedInclude": [
        "/data/jpm/Applications/arduino-1.8.10/hardware/arduino/avr/cores/arduino/Arduino.h"
      ],
      "intelliSenseMode": "gcc-x64",
      "compilerPath": "/usr/bin/gcc",
      "cStandard": "c11",
      "cppStandard": "c++17",
      "defines": [
        "USBCON"
      ]
    }
  ],
  "version": 4
}
```
